Eclypse®
Super Absorbent Dressing Range

Effective exudate management

How do the layers of the Eclypse® dressings work?

- **The backing**
  The water-resistant barrier backing on Eclypse® dressings are bacteria and viral proof and critically prevent strike-through.

- **Secondary layer**
  This layer sits underneath the backing and on top of the moisture locking layer.

- **Moisture locking layer**
  The central layer of the Eclypse® dressing consists of a sheet of highly absorbent crystals and a mechanically bonded cellulose pad.

- **Rapid wicking layer**
  This layer draws up the exudate from the wound bed delivering the exudate into the moisture lock layer.

- **Soft silicone contact layer**
  The silicone contact layer gently adheres to skin but due to the hydrophobic nature of silicone it will not adhere to the wound bed.

Manufactured in our state-of-the-art facility in the UK, our range of Eclypse® super absorbent dressings deliver quality performance in the controlled management of exudate. Our recent developments in the Eclypse® range of dressings have seen an increase in the absorbency of our products by 30%, with no impact on cost.

---

**Eclypse®**
Super absorbent dressing

- High capacity wound dressing designed to absorb and retain fluid, reducing the potential for leaks and minimizing the risk of maceration.

- The dressing has a rapid wicking face combined with a highly absorbent moisture locking system. The absorbent layer provides a large capacity with rapid fluid uptake. The backing features a water resistant barrier film to prevent strike-through with a high moisture vapor transfer rate to prolong wear time.

- **Highly absorbent**
- Non-strike-through, bacteria-proof backing
- Can be used safely under compression without affecting the absorbency
- Absorbs excess MMP’s & factors inhibiting wound healing
- Quality low cost super absorbent, giving product price advantages across the board
- Excellent range of sizes including unique 16in x 24in
- Can be used as a primary or secondary dressing, particularly with our range of Activon Manuka Honey®

**Eclypse Border® and Eclypse Border Oval®**
Super absorbent dressing with silicone contact layer and border

- The soft silicone layer provides gentle adherence that will facilitate atraumatic removal. The hypo-allergenic, dual adhesive border, provides additional dressing security.

- The silicone contact layer does not damage the surrounding skin, peri-wound area or newly formed tissue and will not adhere to the wet wound bed. Ideal for hard to dress areas, the hypo-allergenic border provides dressing security. The dressing features an enhanced wicking layer and increased absorption capacity.

- Increased absorbency capacity
- Atraumatic and hypo-allergenic
- Breathable, fluid-repellent backing
- Provides moist wound healing environment
- Additional wicking and moisture locking central core
- Combination silicone and acrylic adhesive border
- Also available in oval shape
